

Amphenol Socapex Gazette

RNJ LOW PROFILE

RNJ LP connectors are designed for harsh environment rack and panel applications.

These connectors with realignment capability are low profile and allow a short distance between the two panels. This is a real benefit for systems where space is an issue.

RNJ LP are available with several types of inserts : standard MIL-DTL-38999 Series III, single mode fiber optic, quadax, grounded and new High Density (up to 45% more density!). RNJ LP plugs and receptacles are both available in jam nut and square flange configurations, with crimp or PCB tails contacts and stand-off.

CTOS MM

The CTOS MM are expanded beam optical connectors. They were designed to meet an extreme robustness, a quick connection, and a great facility of cleaning of the optical faces.

Moreover they are fully hermaphrodite, which allows connections in series without adapter, without thinking about how to connect the products whatever the number of patchcords.

Consult our website for fiber optic products :

HDAS

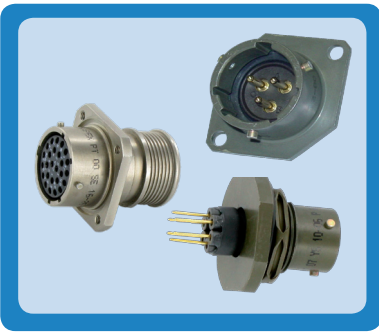

With its robust and simple design, high density and high performance to extreme conditions, HDAS is the right connector when installation, cost and reliability must be considered.

With the brand new HDAS range, Amphenol reduces the pitch and increases the density of contacts.

This family has been designed as an alternative to the HE8 and SIHD connectors.

You can find more details in the Board Level Products catalog you can download on website :

PT/451 : platform design.

Specific shell, coax and power contacts, plating according to the application, wide range of backshells : the PT/451 series meets all those specifications thanks to its capabilities.

In our platform of design and production at Thyez plant, we have the know-how and the expertise to answer your specific needs.

Do not hesitate, consult us !

USB-A Field : new versions !

Amphenol Socapex develops the USB-A Field range of products with new low cost versions : plastic and neoprene. Those rugged USB interconnect solutions are fitted to be used in any industrial harsh environment.

The Self Closing Cap enclosure enables to protect the USB-A Field receptacle from dust and fluids when the plug or the USB Memory key are unmatted.

When plug or keys are matted on receptacle, products are IP67.

Receptacles alone with the spring loaded cap are IP54.
