38999 Receptacles with Stand-Off

Receptacles with stand-off are dedicated to PCB applications. With the stand-off device, the PC board can be screwed directly on the receptacle with M3 screws. It makes the installation much easier and the grounding continuity between the chassis and the board is ensured. As it prevents the contact terminations from any mechanical stress, the reliability against shock and vibration is increased.

Stand-off are available for any 38999 or derived receptacles (RNJ, RNJ LP, SC39), with lead free tin plated PC tails if required.

AXOS-e

More and more mobile system, camera, antenna, are smallest. Due to the digital data, and the increasing network length (more than 100 m), large bandwidth are required.

With fiber optic expanded beam technology and small robust hermaphroditic shell (dia. 27MM) the AXOS is the solution. This product is available in Multimode @ 840/1300 nm in 2/4 channels. The large flat protective windows give to the customer an easy way to clean the connector. With the AXOS, Amphenol Socapex purpose a full solution with cable assemblies and large product range with deployable drum.

HiLinX 2.54 : new staggered grid & crimp termination.

By the development of the new HiLinX 2.54, you can now choose the density of your connector.

Within the HiLinX series, you specify now :

- the density of signal contacts : 1.905 mm pitch in a staggered grid pattern or 2.54 mm pitch
- the number of rows : 2 or 3
- the number, the style, and the place of signal contacts ; crimp version available !
- the number, the style and the place of special contacts : signal, power, fiber optics and coaxial lines.

With HiLinX range, the design of the connector is up to you !

PT/451 : Self Closing Cap.

The Self Closing Cap combined with a PT/451 square flange receptacle protects your system from dust and water projections.

A spring automatically closes the upper part of the receptacle when the plug is removed from the receptacle.

Four sizes are available for this Snap Cap : 8, 10, 12 and 18.

USB-B FIELD TV

The USB-B Field TV is a USB-B connector put into a MIL-DTL-38999 series III shell. The USB-B connects to a peripheral (printer, ...) when the USB-A side of the USB cordset connects to the computer.

Like all the other products of the range, the USB-B FTV can be assembled on a standard USB cordset without any tool, providing sealing and resistance to shocks and vibrations. Amphenol Socapex has a full line of rugged USB : rugged USB-A and USB-B connectors, rugged USB2.0 cables and cordset, rugged USB sticks.
