

PT/451 : adaptation of right angle backshell.

The right angle strain reliefs are not easily manipulated when you wire your PT/451 connectors.

Therefore we decided to adapt a right angle backshell of our SL61 series for the PT/451 plugs.

This backshell with two half-shells is open completely and is closed with two screws ; it will facilitate your cabling operations.

Moreover retention is secured in case of pressure or tension on the cable.

Feel free to contact us for more information.
